

# THE STRASSBURG SOCK

## USER-FRIENDLY NIGHT SPLINT

The Strassburg sock is a very effective, surprisingly comfortable and cost effective compliment to traditional plantar fasciitis treatment regimes.

Conventional hard plastic night splints maintain tension on the fascia by holding the ankle at or near a neutral position. The Strassburg sock provides a more complete and specific tension on the plantar fascia by passively dorsiflexing the toes (and engaging the windlass mechanism) as well as by holding the ankle in neutral position. Used in combination with custom foot orthotics, anti-inflammatory and other conservative therapies, the Strassburg sock night splint significantly improves clinical outcomes.

### THE STRASSBURG SOCK ADVANTAGE:

- A breathable and washable tubular knit “sock” design that is comfortable enough to sleep in
- A unique hook & look adjustable strap design that dorsiflexes the toes as well as holds the foot in a neutral position
- No restriction of the ankle joint

### SIZE OPTIONS

- Adult Regular (up to 16” calf diameter)
- Adult Large (>16” calf diameter)
- A Pediatric version is also available for use in treating ankle equinus
